## DETAILED ACTION

### ***Double Patenting***

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 15-28 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1,2, 4-14 of copending Application No.09703960. Although the conflicting claims are not identical, they are not patentably distinct from each other because claim 15-18 is similar to claim 1 of the copending application in that a plurality of array of photo-sensor elements have different size, different functions and a charge shift registers coupled or adapted to transfer charges to photo-sensor array is broadly covered in claim 1 and 7 of copending application No.09703960. In the instant application of claim 18, 19 and 20 an amplifier coupled to charge transfer register is disclosed in claims 5 and 6 of copending application. Claims 21-28 of the current application discloses a photo-sensor assembly wherein each of photo-sensor elements are arranged and operative to transfer charges.

However, in claims 7 and 14 of the copending application a method of scanning, exposing and transferring charges from the array of photo-sensor is disclosed.

Therefore, these differences are obvious variations of each other
